# INTERNAL SCORING RUBRIC - Senior Python Developer (Job ID: DJ-201)

## SCORE SCALE

Scores are reported on a 0-100 scale with three criterion-referenced rating bands: strong_match (70-100), possible_match (40-69), and low_match (0-39). These bands align with the scoring pipeline's own thresholds, so the rubric and the scorer apply the same cut points.

## MANDATORY REQUIREMENT

All mandatory conditions are required. A candidate missing any of them should not be rated above possible_match, and the score should not exceed 60.

- At least 4 years of professional experience with Python.
- Experience with Microsoft SQL Server (MS SQL).
- Experience developing cloud applications using cloud technologies.

## PREFERRED CRITERIA

- Ability to design Python-based applications or solutions
- Experience with JavaScript and/or TypeScript
- Experience with microservices architecture
- Experience integrating with third-party systems and services
- Finance domain knowledge
- Experience with machine learning

## BASIS

Mandatory and preferred criteria are derived directly from the posted job requirements for this role.
