INTERNAL SCORING RUBRIC - System Administrator (Job ID: DJ-205)

SCORE SCALE

Scores are reported on a 0-100 scale with three criterion-referenced rating bands: strong_match (70-100), possible_match (40-69), and low_match (0-39). These bands align with the scoring pipeline's own thresholds, so the rubric and the scorer apply the same cut points.

MANDATORY REQUIREMENT

All mandatory conditions are required. A candidate missing any of them should not be rated above possible_match, and the score should not exceed 60.

- At least 4 years of administration and support of enterprise Windows environments.
- Experience supporting both Windows and Linux environments.
- Understanding of ITIL principles and SLAs.

PREFERRED CRITERIA

- University degree or equivalent
- Basic networking and datacenter experience
- Experience with service management or ticketing tools such as ServiceNow
- Windows PowerShell scripting
- DNS and DHCP administration

BASIS

Mandatory and preferred criteria are derived directly from the posted job requirements for this role.
