INTERNAL SCORING RUBRIC - QA Automation (Job ID: DJ-207)

SCORE SCALE

Scores are reported on a 0-100 scale with three criterion-referenced rating bands: strong_match (70-100), possible_match (40-69), and low_match (0-39). These bands align with the scoring pipeline's own thresholds, so the rubric and the scorer apply the same cut points.

MANDATORY REQUIREMENT

All mandatory conditions are required. A candidate missing any of them should not be rated above possible_match, and the score should not exceed 60.

- At least 3 years of experience in automated testing.
- Experience with Selenium WebDriver (preferably on the .NET/C# stack).
- Experience with test documentation such as test plans and test cases.

PREFERRED CRITERIA

- Knowledge of test types and how to organise them
- Programming skills (for example C#, SQL or HTML)
- Experience with a database system such as MS SQL, Oracle, MySQL or PostgreSQL
- Experience integrating tests with CI tools such as TeamCity or Jenkins

BASIS

Mandatory and preferred criteria are derived directly from the posted job requirements for this role.
